## PROGRAM ELIGIBILITY

Property must be located in  
the Village of St. Johnsville

Properties may be single-  
family homes, rental  
properties or mixed use

# Village of St. Johnsville Lead Service Line Replacement Program

The Village of St. Johnsville's Lead Service Line Replacement Program will replace lead water service lines in the Village of St. Johnsville Water System. please contact [treasurer@sjvny.org](mailto:treasurer@sjvny.org) to document whether or not your home has a lead service.

While the Village of St. Johnsville's drinking water does not contain lead, the corrosion of lead pipes can cause lead to leach into water flowing through the pipes in a home and potentially into drinking water. The DOH is requiring a complete lead service inventory by 2024 and your participation in this survey will help the Village save both time and money. Please identify if any portion of the water service is lead; including the gooseneck, service, and connection to the water meter. Even if your service is not lead, please respond to this mailer so that it can be documented.

The Village of St. Johnsville is committed to the protection of public health and will begin identifying and replacing lead service lines beginning in the beginning of 2024 and continuing through 2027.
